

IS CARE ONE GIVING YOUR LOVED ONE ANTIPSYCHOTICS?

ANTIPSYCHOTIC DRUGS ARE ASSOCIATED WITH AN INCREASED RISK OF DEATH WHEN USED IN ELDERLY PATIENTS WITH DEMENTIA.

The Woodcrest Health Care Center has given these drugs to nearly 30% of long-stay residents, which is higher than the national and state averages. Care One at Madison Avenue and Care One's Somerset Valley Rehabilitation Center have also used antipsychotics at rates that are higher than the state and national averages.
